

Programming

We code, Boy, do we code

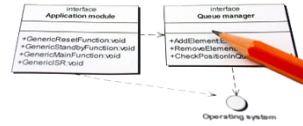

The engine room of E247 is our development team. Extremely talented people with solid experience in their arts, whose problem solving abilities enable us to provide hand coded programming services in a wide range of languages, including C, C++, Javascript, Perl, PHP, ASP, ASP.NET, ColdFusion, XML, SQL Server, MySQL and Access.

- Website Programming & Scripting
- Website Database Development
- Offline Database Development
- E-commerce Solutions
- Content Management Systems
- Online Software Development
- Intranet & Extranet Development
- Website Integration (to third party applications)

Bespoke programming is at the heart of all we do – no templates, no ‘borrowed’ scripts, no pinching bits and pieces from other websites or databases, definitely no ‘bodging’. We create unique programs, databases, scripting and routines for our customers – hand written from scratch.

We improve our client’s business productivity by developing only the very best in online and offline programming. Utilising our skill-sets, we have created, upgraded, and/or integrated into the following:

- Simple to complex e-commerce websites
- Website databases
- Productivity tools (online & offline)
- Simple to complex content managed websites
- XML, XHTML, RSS
- Intranet/Extranet design and development
- Bespoke software development (online & offline)
- Microsoft, Java and open source development

Programming

We have a solid track record in producing bespoke e-commerce solutions, web content management systems, corporate intranets, email marketing software and various other unique applications which assist our customers by improving their daily business output.

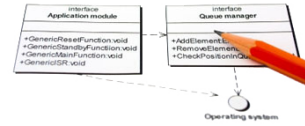

All of our solutions are built to fit specific client requirements and are constructed with reliability, robustness and future-proofing in mind. We never forget the importance of usability and accessibility.

Our e-commerce sites range from simple 2 or 3 product websites, through to high volume trading sites taking £millions in revenue, which can be self managed. We provide solutions that give an excellent return on the money invested in creating them.

E247 specialise in enabling clients to manage all areas of content within their websites, without any technical knowledge. We build content management systems (CMS) exactly to suit client requests and requirements. We **do not** use any proprietary or 'boxed' software that imposes limitations or prohibits future expansion.

We make it possible for clients to do the following, via a web browser, on any computer (Mac/PC/Linux):

- easily update text & pictures on their website/online store
- upload new word docs, PDF's & other files to their website/online store
- create new pages with new content
- send email newsletters to a subscribed mailing list
- add/edit/delete products & categories within their website/online store
- re-order & arrange products & categories within their website/online store
- add/edit/delete customers & contacts within their website/online store
- add/edit/delete FAQs, News, & Literature within their website/online store
- add/edit/delete & maintain product price lists within their website/online store
- create/add/edit/delete & maintain management reports within their online store
- access information within various databases attached to their website/online store
